Throttle Position Sensor: (TPS) The throttle position sensor (TPS) is mounted on the side of the throttle body opposite the throttle lever assembly. It's function is to sense the current throttle valve position and relay that information to the ECM. Throttle position information allows the ECM to generate the required injection control signals.

The throttle body is part of your air intake system. It uses a butterfly valve to control the amount of air flowing into the engine based on the position of the accelerator pedal. If you need to repair your throttle body, and a throttle body assembly is not available for your vehicle, a throttle body repair kit is the perfect solution.

### Throttle Body Repair Kit | O'Reilly Auto Parts

Two versions of the optional 454 were available in 1-ton Chevy trucks. The LEB 454 was the most common from 1973 to 1991. The L19 TBI, or throttle body injection, powered 1987 and later trucks as the second 454 engine option. The TBI 454 had fuel injectors in the middle of the throttle body that increased fuel efficiency, power and durability.
