7-3 Elimination Using Addition and Subtraction. Write and Solve a System of Equations Example 2 Twice one number added to another number is 18. Four times the first number minus the other number is 12. Find the numbers. Let x represent the first number and y represent the second number. Twice one number added to another number. Four times the first numbeg minus the other number Use elimination to solve the system. $2x + y (+) 4x - y = 18$ Write the equations in column form and add. = 12 ...

Practice 7-3 Solving Systems Using Elimination

Lesson 7-3 Elimination Using Addition In systems of equations in which the coefficients of the x or y terms are additive inverses, solve the system by adding the equations. Because one of the variables is eliminated, this method is called elimination. Use addition to solve the system of equations.
