Apache Velocity is a Java -based template engine that provides a template language to reference objects defined in Java code. It aims to ensure clean separation between the presentation tier and business tiers in a Web application (the model-view-controller design pattern).

## **Apache Velocity - Wikipedia**

I was unable, however, to find out what that root is. So, on initialising the Velocity Engine, I had to enable this to accept relative paths: `properties.setProperty(RuntimeConstants.EVENTHANDLER_INCLUDE, IncludeRelativePath.class.getName());`  
`velocityEngine = new`  
`org.apache.velocity.app.VelocityEngine(properties);`
