We all know cycling is an evolving sport, new alternatives are chosen every year in terms of materials, design and technology. At Steel Vintage Bikes we believe in innovation, but we also think that modernisation and tradition can cooperate, to realise innovative solutions that will offer to the rider a fantastic experience without giving up what only steel can provide.

Modern Steel Road Bikes & Frames - Steel Vintage Bikes

To many bike racers, the mere suggestion of racing on a steel frame, let alone training on one, would be considered a joke. For some unwarranted reason, steel has gained a reputation in certain circles as being slow, heavy and technologically retarded - similar to the now unfounded reputation diesel-powered cars earned in the United States.

2016 Buyer's Guide: Best Steel Bikes | Bicycling

Ah steel, the no fuss workhorse of bike frame materials. Steel was the universal choice of racing bike frames until aluminium appeared in the 1970's and 1980's and carbon fiber took over in the 1990's. There are two distinct types of steel used in the bicycle industry.

Bike frame materials explained

By the time the modern "safety" bicycle was developed in the late 1800s most frames were made with steel tubing instead of wood or cast iron. While the steel bicycles were quite strong they were also very heavy. It was not uncommon for a bicycle of that era to weigh in at

Science of Cycling: History of Bicycle Frames | Exploratorium

Depending on the tube profiles, a stainless bike can be just as lively as the best steel frame, but it can be snappier. And, of course, stainless tubes are much stronger, and they have a naked finish that lasts without ever getting tarnished. I don't think there's any wall surface that has a harder surface than a stainless tube.

The Surge of Stainless Steel | Road Bike Action

With a steel frame, rack, and mudguard braze-ons, and a wide range of gears for steeper gradients, the 520 is ready for multi-day bike tours, serious commuting, and bikepacking.
