Access Free Graphing A Heating Curve For Water Lab Answers

A plot of the temperature versus time is called the heating curve . Water is a common substance. Ice is the stable phase below 0 o C. Both solids and liquids coexist at 0 o C. When heat is put into the system, more solid will melt. Thus, the temperature does not change. The normal boiling point is 100 o C.

heating curve for ...

Since this is at constant pressure then $q = \Delta H = m C \Delta T$ where q is the heat, m is the mass, C is the specific heat capacity, and ΔT the change in the temperature. As this graph is a plot of T vs q , the slope is actually $1/mC$. Next the solid melts. During this time the temperature is constant at 0°C .
