Nikola Tesla (1856 - 1943) conceived the concept of alternating current in 1886, together with the concept of using transformers to step up the voltage, causing a proportional reduction in current. The use of higher voltages therefore permitted the construction of longer lines to supply power

Kirchhoff's Voltage Law (KVL) In any closed loop network, the total voltage around the loop is equal to the sum of all the voltage drops within the same loop, which is also equal to zero. In other words, the algebraic sum of all voltages within the loop must be equal to zero. Further Reading: Divider Circuits And Kirchhoff's Laws
