Mercruiser Freshwater Cooling Kits - Go2marine

The heat exchanger is the heart of the closed cooling system. It uses raw lake or ocean water brought in from the raw water pump to act as coolant for the engines circulating water. The circulating water runs in a closed loop through the engine only in a half system and in a full system, the exhaust manifold as well.

Marine Closed Cooling Systems - cpperformance.com

Marine Fresh Water Cooling systems are similar to the cooling system in an automobile however rather than a radiator they utilize a heat exchanger, and rather than using air to remove the heat generated by the engine they use lake or ocean water.

Engine MerCruiser Magnum EFI GEN+ Alfa One Operation And Maintenance Manual. I/ix efi (Mercruiser utilizes a full flow closed cooling system on the dry joint exhaust their marine cooling systems, both raw water and fresh water cooling systems. I want to confirm that the water pump is delivering proper flow after my replacement.

Mercruiser 5.7 Water Flow Diagram

In a raw water system the water is drawn up through the seacock by the water pump. The water flows through the engine and directly out the exhaust. This cooler water absorbs heat from the engine to help keep it cool. Most newer marine engines use an enclosed cooling system.

Engine Cooling Systems Explained - Boat Safe

In the old days, many marine engine cooling systems were of the "raw-water" variety, meaning simply that they relied on pumping whatever water the boat was floating in through the engine and pumping it out the exhaust system—salt water, polluted water, algae-infested water, whatever was available.
