The Sepsis Text | Jean-Louis Vincent | Springer

Patients with severe sepsis requiring ICU admission have very high rates of ICU and overall hospital mortality, with estimates ranging from 18 to 50%. Risk factors for death from sepsis include underlying illness, increased age, and multi-system organ failure. This is compounded by the significant variation in the management of early severe sepsis.

Sepsis is one of the most common causes of death among hospitalized patients in the intensive care unit (ICU). It is particularly difficult to diagnose in this setting because of the multiple comorbidities and underlying diseases that these patients present [1, 2].The definitions of sepsis and septic shock focusing on the host's inflammatory response have remained unchanged since the first ...

Sepsis: A Review of Advances in Management | SpringerLink

Septic encephalopathy is an early manifestation of sepsis. At times it can be profound and patients with septic encephalopathy have a higher mortality than those without. Its pathogenesis is uncertain but it has the hallmarks of a global metabolic brain injury and even if severe it appears to be reversible.

Conclusion. SvO 2 can be considered as a marker of the global balance between SvO 2 and actual SvO 2.A decreased SvO 2 (< 65%) may be an argument that would incite the clinician to raise DO 2 in the view of preventing or reducing global hypoxia in patients with sepsis or septic shock. However, systemic blood flow is frequently high in septic shock so that SvO 2 is most often in the normal ...
