Solution Bessel Differential Equation

$n^2 = v^2 + 1/4(a-1)^2$. As a result, the general solution of the differential equation is given by. $y(x) = x^{1-a/2} [C_1 J_n(x) + C_2 Y_n(x)]$. The special Bessel functions are widely used in solving problems of theoretical physics, for example in investigating. wave propagation; heat conduction; vibrations of membranes.

Abstract: We obtain a class of exact solutions of a Bessel-type differential equation, which is a six-parameter linear ordinary differential equation of the second order with irregular (essential) singularity at the origin. The solutions are obtained using the Tridiagonal Representation Approach

that the differential domain $[D, x] = [\partial, x]$ is defined. Definition 1.5 By the solutions of L we mean the solutions of the homogeneous linear differential equation $Ly=0$. They are denoted by $V(L)$. When talking about differential equations, the term order is commonly used for the degree of the corresponding operator.

Solving Differential Equations in Terms of Bessel Functions

Solution. This equation differs from the modified Bessel equation by factor 4 in front of x^2 . The order of the equation is $\nu = 1/\sqrt{2}$. Then the general solution is written through the modified Bessel functions in the following way: $y(x) = C_1 I_{1/\sqrt{2}}(2x) + C_2 K_{1/\sqrt{2}}(2x)$, where C_1 and C_2 are arbitrary constants.

(13) The general solution of the Bessel equation of order zero for $x > 0$ is $y = c_1 J_0(x) + c_2 Y_0(x)$. Note that $J_0(x) \rightarrow 1$ as $x \rightarrow 0$ and that $Y_0(x)$ has a logarithmic singularity at $x = 0$; that is, $Y_0(x)$ behaves as $(2/\pi) \ln x$ when $x \rightarrow 0$ through positive values.

General Solution of Bessel's Equation, Order Zero (10 of 12) ! The general solution of Bessel's equation of order zero, $x > 0$, is given by where ! Note that $J_0 \rightarrow 0$ as $x \rightarrow 0$ while Y_0 has a logarithmic singularity at $x = 0$. If a solution which is bounded at the origin is desired, then Y_0 must be discarded.
