TNM Classification of Malignant Tumours - 7th edition

The TNM Classification of Malignant Tumors (TNM) is a globally recognised standard for classifying the extent of spread of cancer. It is a classification system of the anatomical extent of tumor cancers. It has gained wide international acceptance for many solid tumor cancers, but is not applicable to leukaemia and tumors of the central nervous system.

TNM staging system - Wikipedia

The UICC TNM Project has published the 8th Edition of the TNM Classification of Malignant Tumours that comes into effect on January 1, 2017. Since some organizations may not be ready to adopt the new classification, we recommend that the edition of the TNM classification be always included in data reporting.

TNM Classification of Malignant Tumours - 8th edition ...

The M refers to whether the cancer has metastasized. This means that the cancer has spread from the primary tumor to other parts of the body. When your cancer is described by the TNM system, there will be numbers after each letter that give more details about the cancer—for example, T1N0M0 or T3N1M0.

Cancer Staging - National Cancer Institute

An example of a tumor description according to the TNM classification could be T1N0M0. This would mean that the tumor has only moderate localized spread, does not affect any lymph nodes, and has no distant metastases. Lowercase letters that precede the TNM code help provide additional information.

Tumor Classification: Staging and Grading | Medical Library

The TNM system for the classification of malignant tumours was developed by Pierre Denoix (France) between the years 1943 and 1952.¹ In 1950, the UICC appointed a Committee on Tumour Nomenclature and Statistics.
