Introduction. The three fundamental gas laws discover the relationship of pressure, temperature, volume and amount of gas. Boyle's Law tells us that the volume of gas increases as the pressure decreases. Charles' Law tells us that the volume of gas increases as the temperature increases. And Avogadro's Law tell us that the volume of gas increases as the amount of gas increases.

How to Use the Ideal Gas Law in Two Easy Steps

Charles Law or Law of Volume states that at constant pressure, the volume of a given mass of a gas is directly proportional to its absolute temperature; i.e., at constant pressure, $V \propto T$ or $V/T = \text{constant}$. Proof: Now as $c \propto 2 \propto T$, thus at a constant pressure for a given mass of a gas, $V \propto T$.

A governor, or speed limiter or controller, is a device used to measure and regulate the speed of a machine, such as an engine.. A classic example is the centrifugal governor, also known as the Watt or fly-ball governor on a reciprocating steam engine, which uses the effect of inertial force on rotating weights driven by the machine output shaft to regulate its speed by altering the input flow ...

Using a gas can is a convenient way to power up your lawnmower or other gas-fuelled machines. When you fill your can up at a gas station, place it on the ground to discharge any static energy in the gas. Remove the cap, place the nozzle in the can, and fill it up. Leave a little space in the top of the can to prevent spills and account for it ...
